

ARTIFICIAL INSEMINATION

ABOUT US

Panama Fertility was founded 35 years ago, with the idea of providing the highest standards in Reproductive Medicine, with a firm and sustained focus on creating families through the latest medical advances. Our proven methods provide the highest pregnancy rates in the country and the region, with a 50% effectiveness rate above the rest of the centers. We have been able to help deliver more than 10,000 healthy babies since the beginning, through our Doctors, trained in the United States with the latest generation in technology and scientific research.

OUR TEAM

Panama Fertility has an interdisciplinary team composed of In Vitro Fertilization Coordinators, Embryologists, Financial Coordinators and Patient Care that will help you in every phase of your treatment with all the information in detail.

WHAT IS THE ARTIFICIAL INSEMINATION TECHNIQUE?

We will introduce your partner's sperm, previously selected, at the most appropriate moment, directly into your uterus, to increase the chances of pregnancy.

PHASES OF TREATMENT. FOUR SMALL STEPS TO ACHIEVE PREGNANCY

We will inseminate your egg with your partner's sperm in the uterus, without the need for the eggs to be retrieved.

We will monitor and stimulate the ovaries. We will administer hormones to your ovaries so that there is a better chance of success. We will monitor the development of the cycle through ultrasound scans to verify that the number and size of follicles is adequate.

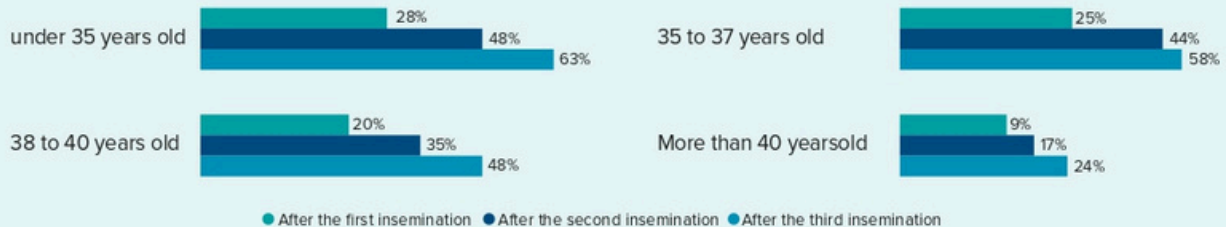

We will prepare the semen sample. On the day of insemination, the semen sample is delivered to the laboratory. We separate the motile sperm from the rest, in order to have a sufficient concentration of motile sperm to perform the insemination.

It is time for insemination. On the day of ovulation we load the selected sperm sample into a fine cannula and introduce it into the uterus. It is a simple process, painless and very similar to any gynecological examination.

PREGNANCY PROBABILITIES

Artificial insemination is the treatment recommended until the age of 40, and its results are cumulative, reaching their optimal level in the third attempt.

COST OF TREATMENT

\$850.00

This amount includes all the medical procedures necessary for its realization, from your first visit, until its completion.
What it does not include, as it varies depending on each patient, are the necessary prior medical tests and medication.
How long does the treatment last? Only one month. And the best thing is that at Panama Fertility there is no waiting list so treatment can be started at any time.

Due to our success rates and personalized attention, patients from all over the world travel to our center for treatment.
