

EGG DONATION

Closer than ever to making your dream a reality!

Thank you for trusting Panama Fertility to accompany you on this journey. Our commitment is to provide the medical, emotional, and financial care you need to make your dream of bringing your baby home a reality.

Our experience speaks for itself

Together, we will create a personalized medical plan based on your individual needs, to offer you the best possible solution and help you bring your baby home.

Over 10,000 healthy babies at home, thanks to our personalized treatments.

97% Success Rate:

9 out of 10 couples who come to our center achieve their dream of having a baby at home, and **1 out of every 2 babies born through assisted reproduction in the region** is part of our Panama Fertility family.

Over 30 Years of Experience:

With specialists trained at top hospitals in the United States and backed internationally by world-renowned medical institutions, we are the most experienced fertility center in the region, with the highest number of successful cases.

Timeline

Learn about the stages your In Vitro Fertilization (IVF) treatment will go through.

Donor Selection

The patient selects 3 preferred donors from our platform. Our egg donation team then confirms the availability and compatibility of the first choice. Once confirmed, the donor is reserved.

Fertilization and Embryo Culture (3–5 days)

In vitro fertilization is performed, and embryos are cultured until the blastocyst stage.

Endometrial Preparation

The recipient patient begins hormonal treatment to prepare for the embryo transfer.

Embryo Transfer

One or more embryos are transferred into the uterus.

Pregnancy Test (10 days later)

A blood test is performed to confirm pregnancy.

Some stages may vary slightly depending on the clinical case and individual response to treatment. Additionally, further studies, hormonal tests, genetic evaluations, or complementary treatments—such as endometrial preparation prior to a frozen embryo transfer—may be required, which are not reflected in this general timeline.

Financial Proposal

Here is our personalized proposal tailored to your needs.

Servicio	Precio
IVF	\$7,000
Remote Monitoring	\$250
Total	\$7,250

*In Vitro Fertilization Includes:

Frozen Donor lot (6 to 8 eggs), anesthesiologist, ICSI, embryo culture, and embryo transfer.

*Remote Monitoring includes: communication, review, and integration of results with the Panama Fertility team.

1. General Conditions

- All packages include only the procedures specified in the selected treatment program.
- Medications are not included. The estimated cost is approximately \$500, but this may vary depending on the medical protocol and the patient's individual response.

2. Additional Services and Fees

- If PGT-A or a Frozen Embryo Transfer (FET) is requested, an additional payment timeline will apply.
- Annual embryo storage has a cost of \$400, billed from the date the first batch is frozen.
-

3. Payment Timeline

For egg donation treatments, full payment is required before beginning the process.

If the treatment includes PGT-A or a frozen transfer, additional payments will be made as the cycle progresses:

- Before starting: treatment package + monitoring
- After biopsy (Day 5): PGT-A payment
- Before frozen transfer: FET payment + endometrial monitoring

4. Cancellation and Refund Policies

- Once the donor is assigned and the protocol has begun, cancellations or donor changes are not allowed, except in medically justified cases.
- If no eggs are retrieved during aspiration, a new batch will be assigned at no additional cost, but only if the failure is attributable to the donor.
- No full or partial refunds will be granted if no viable embryos are obtained or if no embryo transfer takes place.
- If the recipient chooses to postpone or cancel the transfer, she will be responsible for covering the cost of a new endometrial preparation cycle.

5. Additional Services

Descripción	precio
Frozen Embryo Transfer (FET) – Cost for the first year. From the second year on, the cost is \$1,500 per transfer.	\$999
Endometrial Monitoring for Transfer – Includes all ultrasounds and hormone tests during the preparation cycle.	\$650
PGT-A (embryo biopsy) – Charged per embryo to be tested. PGT-A lab fee – Paid directly to the genetic lab. \$200 setup + \$200 per embryo.	\$200 Per Embryo
Zymot (sperm selection) – Filtering technology to select sperm with better motility and morphology.	\$200
Frozen Embryo Storage – Billed annually from the date of first embryo freezing	\$400 Per Year
Embryo Transport – Applies when transferring embryos to another clinic or lab.	\$250
Sperm Freezing – Includes initial semen collection and preservation. Monthly storage: \$40.	\$200
Donor Eggs – Includes donor assignment and retrieval of 6 to 8 mature oocytes.	\$4,000
Donor Sperm (approximate) – Based on provider and type of sample requested.	\$1,500
Consultations at Panama Fertility – Medical follow-ups and fertility evaluations.	\$100
Hormonal Tests – Estradiol, progesterone, and others performed at Panama Fertility.	\$50 each
